PROJECTS AND RESEARCH

Topological Analysis of Ventilation Defect Percentage in Lungs

September 2018 - Present

Undergraduate Research Project

- Investigated various metrics from MRI and CT images, related to the lung on a whole-lung, lobar, and sub-lobar level.
- Medical image analysis (segmentation, filtering) used to directly locate defects in the two different imaging systems.
- Segmentation done with MATLAB, and statistical analysis done in RStudio.

Molybdenum-99 Producing Reactor Design

January 2020 - May 2020

Senior Design Project

- Designed a subcritical Uranium-235 target based reactor to produce enough 6-day Curies of Molybdenum-99 for the UW Hospital System.
- Design was created primarily with MCNP6.2 and MATLAB.
